TEMUUJIN GERELT OCH

SOFTWARE ENGINEERING STUDENT / AI & MACHINE LEARNING

temka4705@gmail.com / +82 10-8089-3208 / Seoul, South Korea
github.com/Riseikou1 temuujn.tech LinkedIn: temuujin-gerelt-och

PROFILE

Software engineering undergraduate focused on building practical AI systems, from language-model training to deployed applications. Hands-on experience with PyTorch, distributed GPU training, supervised fine-tuning, semantic retrieval, and model-serving infrastructure. Developed Jarvisn't and Research GAP to explore both model development and evidence-grounded AI applications. Interested in model optimization and efficient inference, with an emphasis on reliable evaluation, computational efficiency, and clear user experiences.

EDUCATION

Kookmin University

2024 - Present

Software Engineering / 3rd year, 2nd semester / **GPA: 4.2**

SELECTED PROJECTS

Jarvisn't ↗

Language Model Training & Inference

PyTorch / BPE tokenization / Distributed training / RunPod / Hugging Face / Next.js

- Adapted Andrej Karpathy's nanochat into a language-model project spanning tokenizer training, pretraining, supervised fine-tuning, evaluation, and inference.
- Trained a 24-layer decoder-only Transformer using 4 NVIDIA H100 GPUs, with a 32,768-token BPE vocabulary and a 2,048-token context window.
- Built a RunPod inference worker that loads Hugging Face checkpoints once per process, validates chat inputs, and manages conversation context for a Next.js chat interface.

Research GAP ↗

Research Literature Analysis Platform

Python / FastAPI / Next.js / TypeScript / OpenAlex / OpenAI / PostgreSQL / Supabase

- Built a full-stack application that retrieves scholarly papers, extracts supporting evidence, and checks potential research gaps against counterexamples.
- Implemented section-aware full-text retrieval with embeddings and field-specific ranking, using a 7,500-token context budget and exact-quotation validation.
- Added Google authentication, analysis history, credit controls, and evidence exploration; used durable caches and bounded workers to control repeated API work.

TECHNICAL SKILLS

Programming: Python, TypeScript / JavaScript, SQL, C++, Java, Bash
AI / ML: PyTorch, scikit-learn, OpenCV, Transformers, fine-tuning, embeddings
Training & Efficiency: Distributed GPU training (PyTorch DDP), model optimization, quantization
Web / Data: FastAPI, Next.js, React, PostgreSQL, MySQL, Supabase
Tools / Deployment: Git, Linux, Docker, RunPod, Hugging Face, Vercel

MENTORING

Academic Mentor

Mar - Dec 2024

Supported a government scholarship student with academic guidance, study strategies, and progress monitoring.

LANGUAGES & DEVELOPMENT

Mongolian: Native / **Korean:** TOPIK Level 5 / **English:** B2
Additional training: Udemy coursework in machine learning, deep learning, LLM engineering, agentic AI, and computer vision.
